We have identified an error in the derivation of Eq. (14) in the above-named paper.¹ The correct value of the induced potential $\Delta\phi$, in the absence of phase-incoherent scattering, is in fact zero.² This renders the subsequent discussion of $\Delta\phi$ and the 4-point conductance G_{4P} incorrect in this case.

The main results and conclusions of the paper, as well as the example which refers to the modified 4-point conductance \tilde{G}_{4P} in which phase incoherence is accounted for, are correct and unchanged.

Both phase-coherent and phase-incoherent cases are analyzed further in a new paper.²
